4.2	Monthly Excel Format . . . . .	20

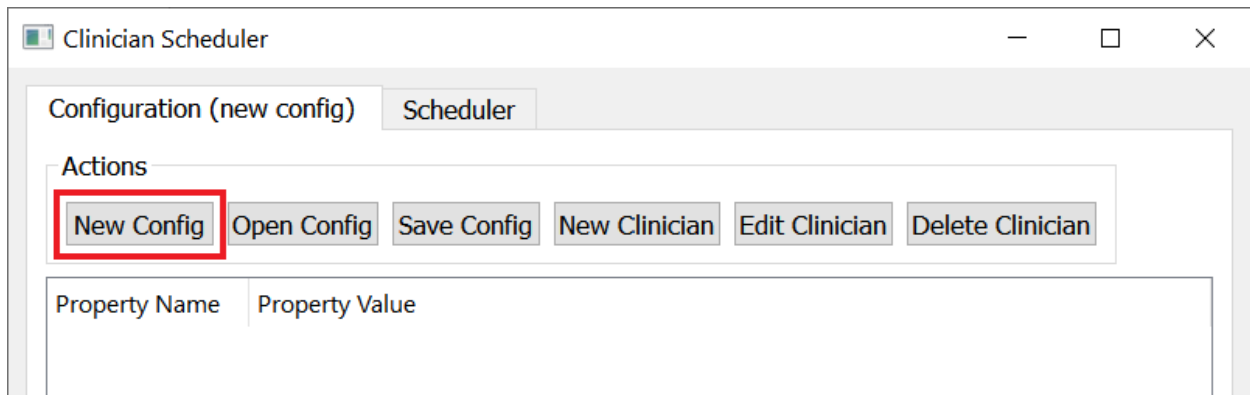

## CLINICIAN CONFIGURATION

The clinician configuration specifies which clinicians are available, which divisions they are covering, and how many weeks they should cover in each of their divisions.

### 1.1 Creating a new configuration file

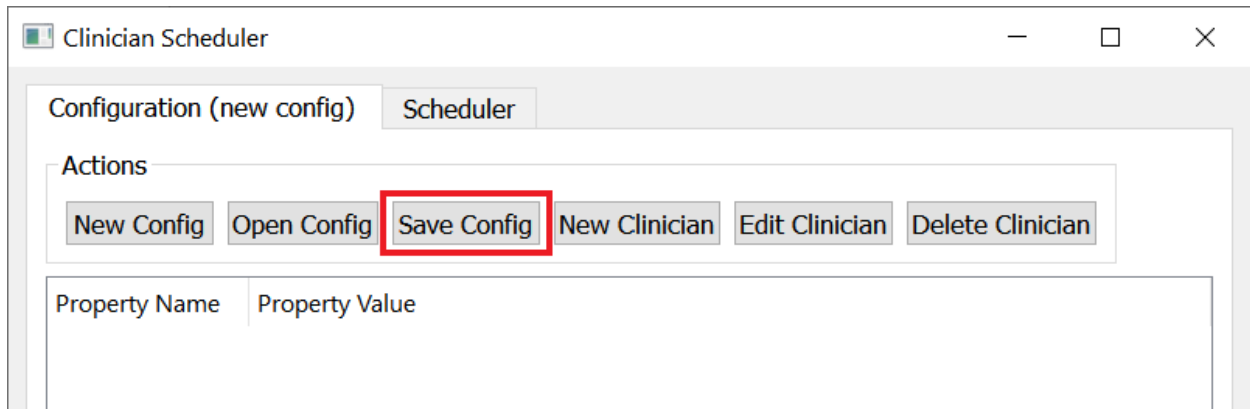

By default, you will get a blank configuration file when you launch the program. If you would like to discard the changes you have made and start a configuration file from scratch, simply click on *New Config*.

**Warning:** Unsaved changes to a configuration file will be discarded upon clicking on *New Config*.

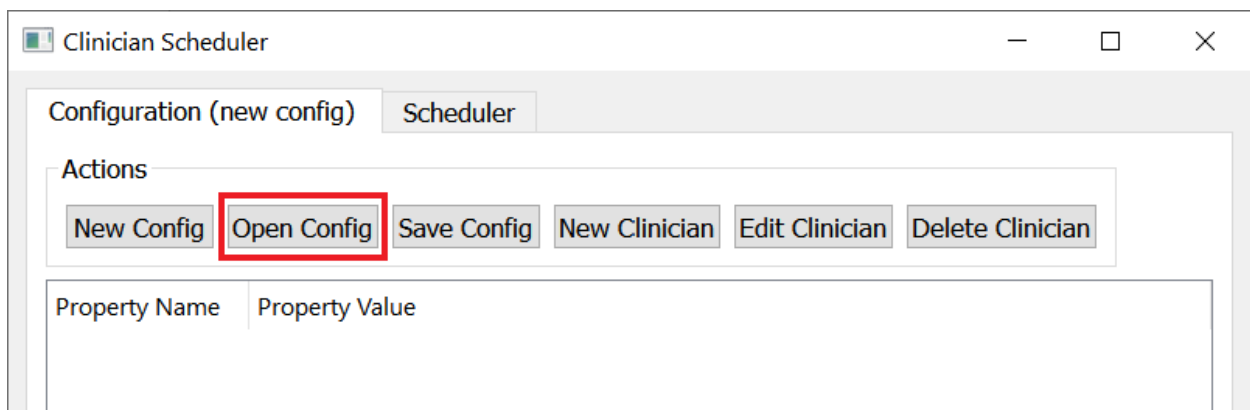

### 1.2 Saving the configuration file

When you are ready to save the configuration you created, click on *Save Config* and choose a place to save your file. Make note of the name and directory of the file so you could load it in future runs.

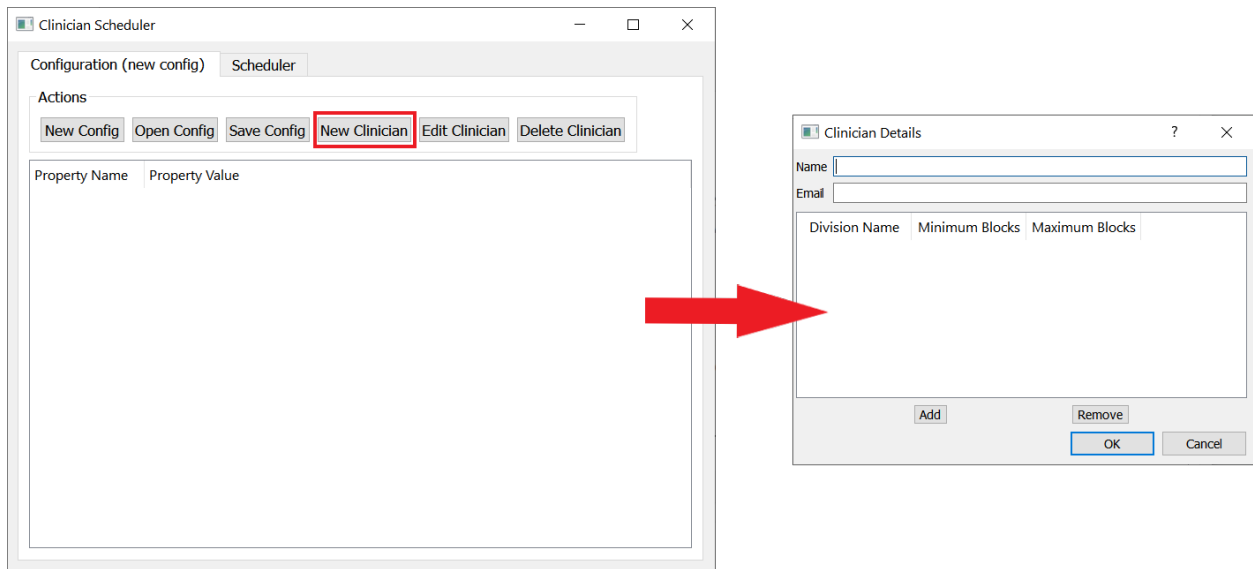

## 1.3 Loading a configuration file

If you would like to open a previously created configuration file, simply click on *Open Config*, navigate to the location of the file, and select it.

## 1.4 Adding a new clinician

1. From the configuration tab, click *New Clinician*. You should see a form for supplying clinician details.

2. Fill out the name, email (optional), and divisions that the clinician will be covering. To add a division you can click on *Add* and a new row will be added to the table which you can fill out. You can set the minimum and maximum number of blocks that a clinician can work in a given division.

**Note:** A single block corresponds to two weeks.

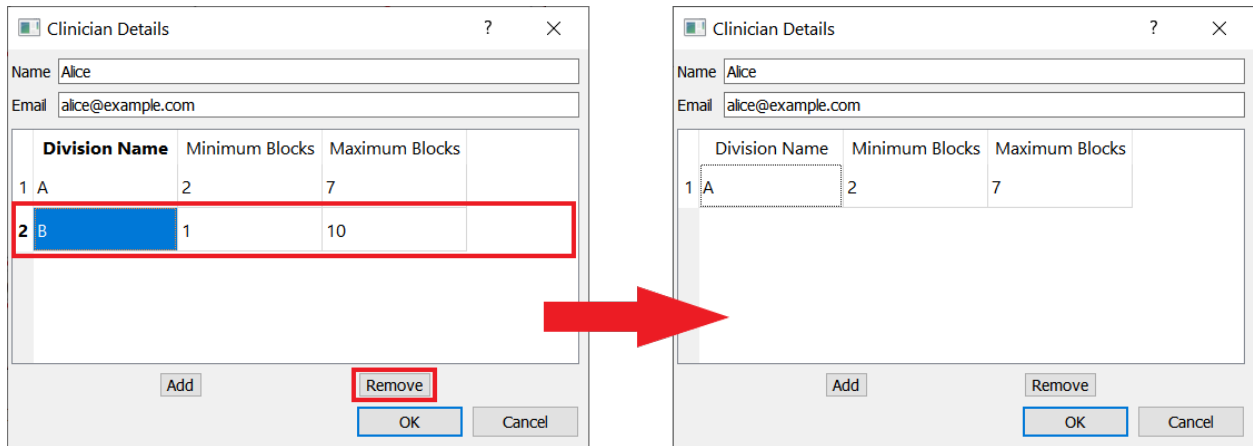

The screenshot shows the 'Clinician Details' dialog with the following data entered:

- Name:** Alice
- Email:** alice@example.com
- Table:**

	Division Name	Minimum Blocks	Maximum Blocks
1	A	2	7

The 'Add' button at the bottom is highlighted with a red box. The 'OK' button is highlighted with a blue box.

3. To delete a row from the table, select the row and then click *Remove*.

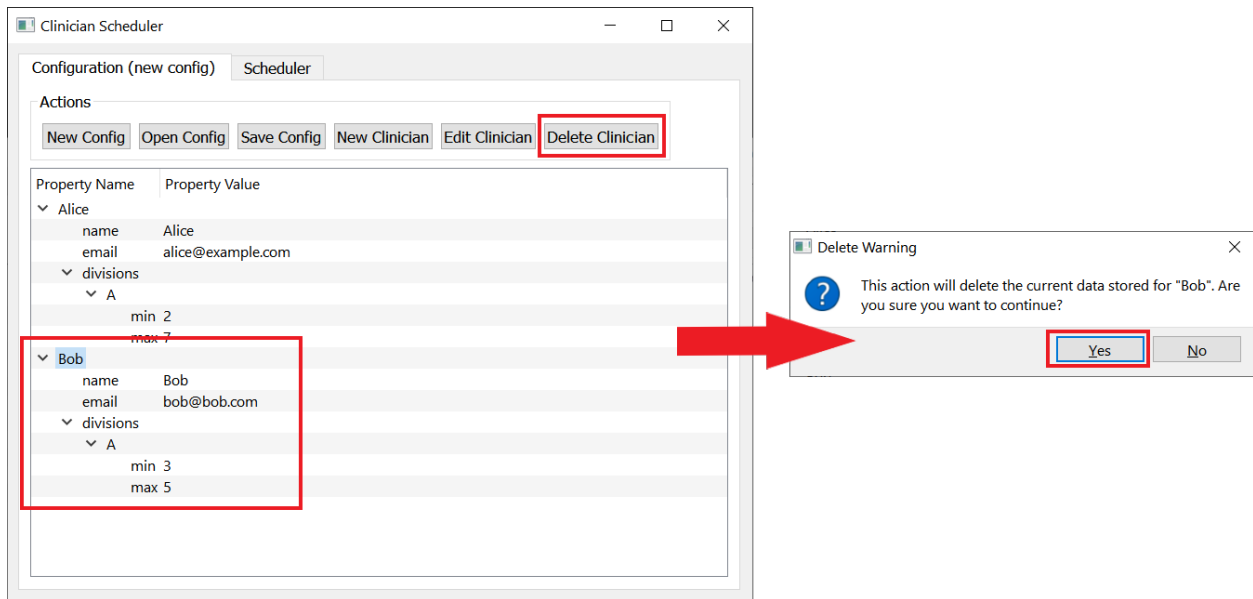

4. When you are finished entering the data for the clinician, click *Ok*. You should now see a new entry in the main table for that clinician.

## 1.5 Deleting an existing clinician

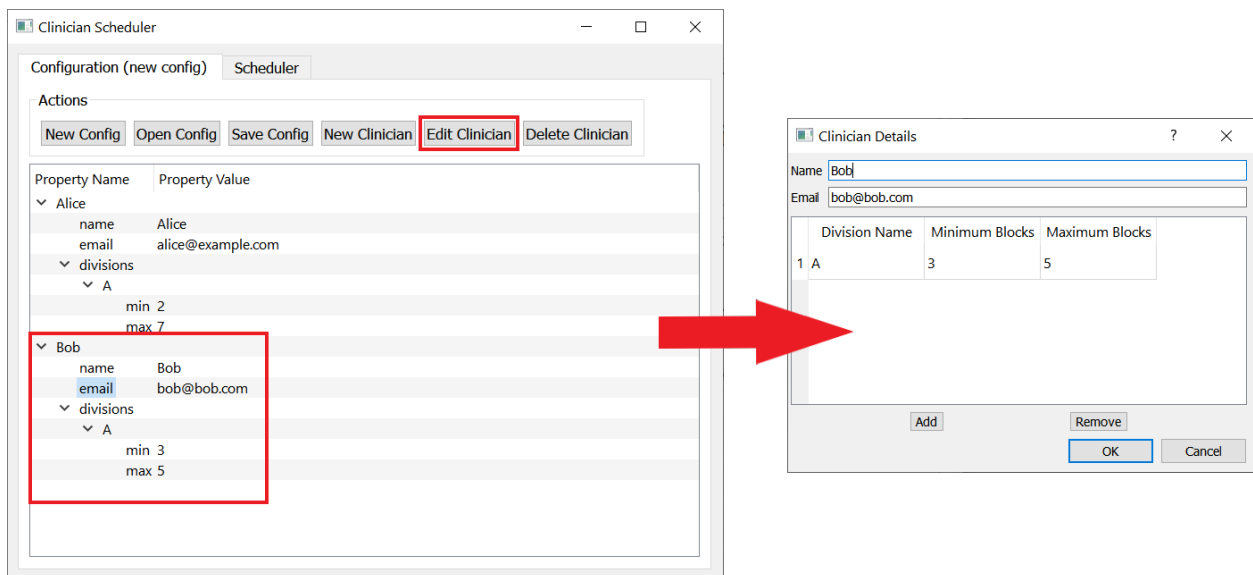

To delete an existing clinician, simply select a row corresponding to the clinician in the table and click on *Delete Clinician*.

## 1.6 Editing an existing clinician

To edit the information of a clinician, select a row corresponding to the clinician in the table and click on *Edit Clinician*. You should see a dialog window where you can change the information. For more details on how to enter data in the edit dialog, see [Adding a new clinician](#).

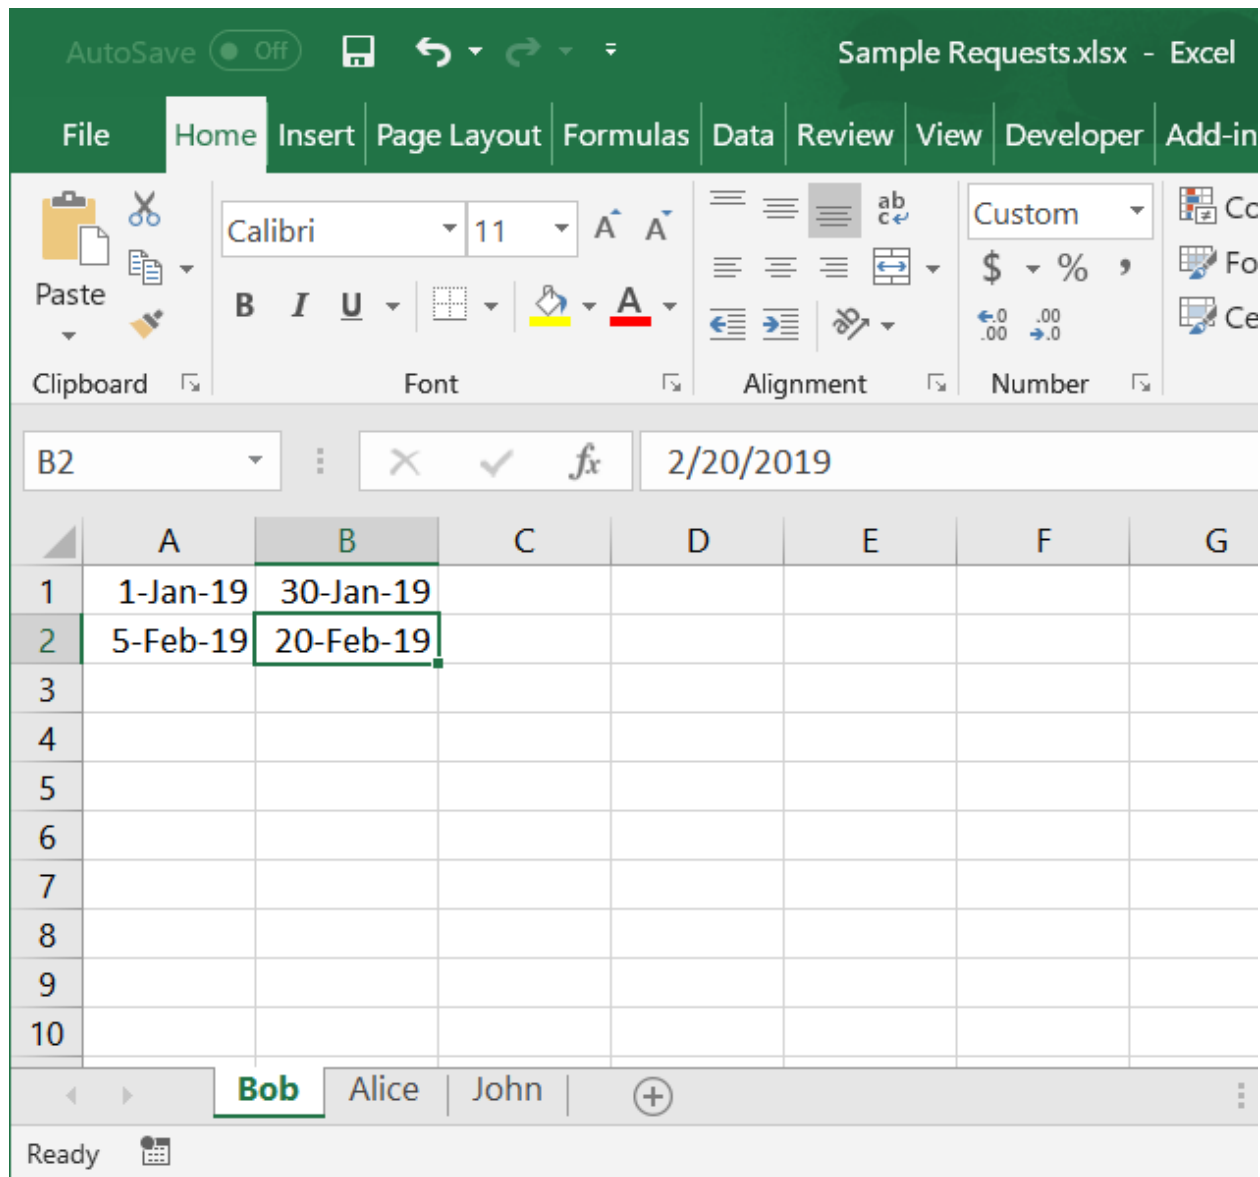

## REQUESTS & HOLIDAY WEEKENDS

Clinician requests for time-off and the dates of holiday weekends are supplied using a pair of excel files.

### 2.1 Clinician Requests Excel File

The requests file should have a single sheet per clinician that is in the configuration file you created in *Clinician Configuration*. Inside each sheet, each request is entered on a separate row, containing the start and end date (inclusive) of the request.

<b>Warning:</b> Make sure each value in the Excel file is formatted as a date!
--

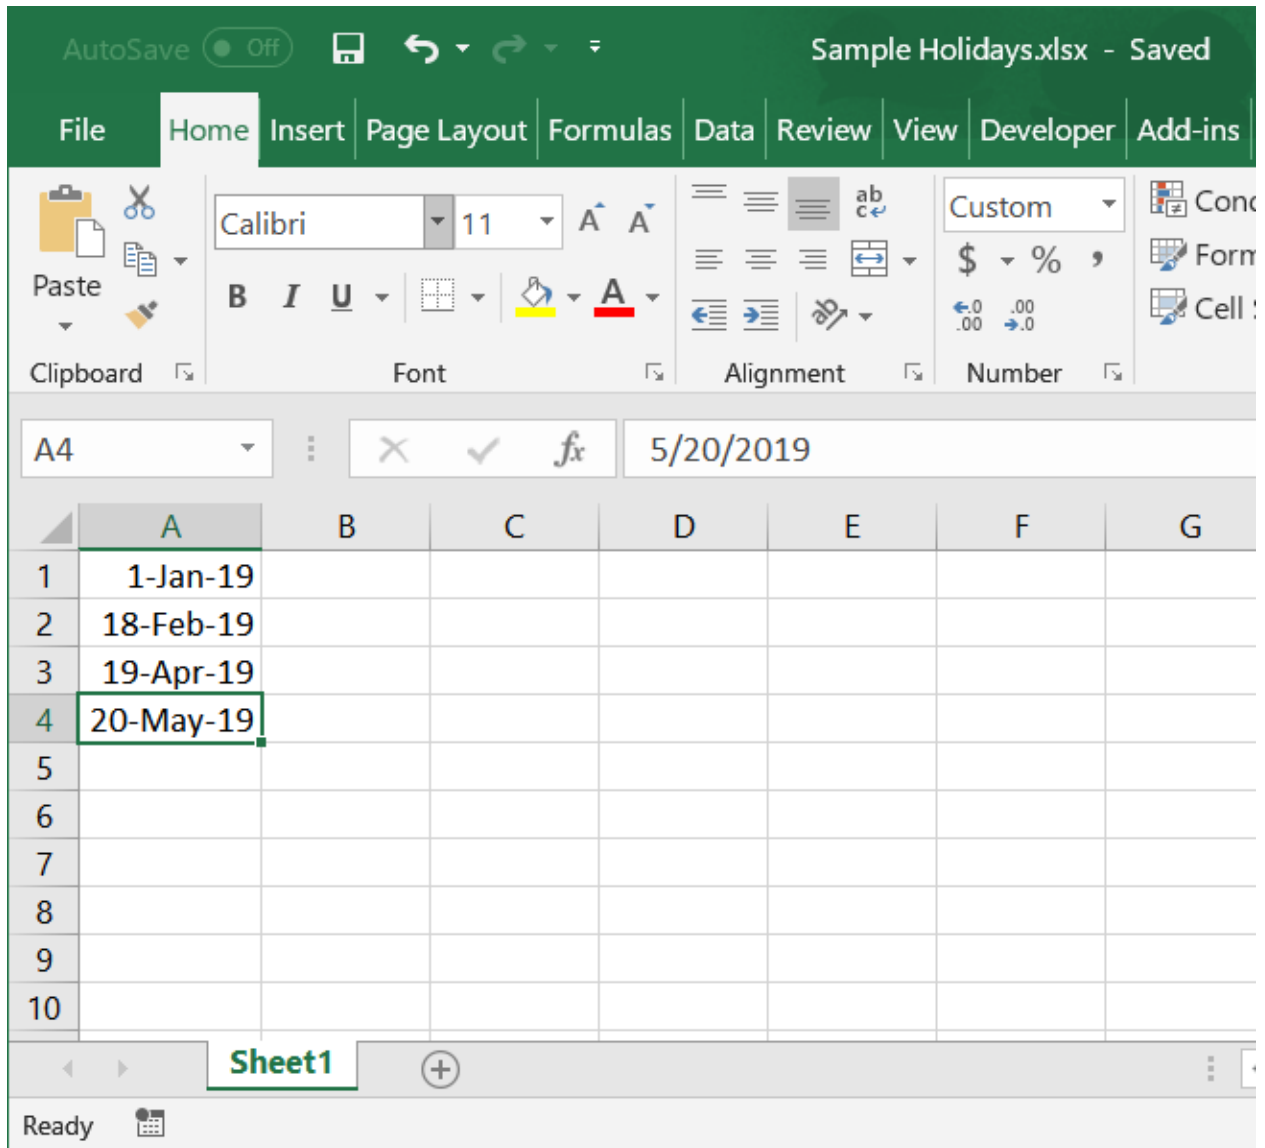

**Note:** To enter a request for a single day, use the same value for both start and end date.

## 2.2 Holiday Weekends Excel File

The holiday weekends file should have a single sheet with the dates of the holiday weekends, one in each row.

**Warning:** Make sure each value in the Excel file is formatted as a date!

## SCHEDULING

### 3.1 Generating a schedule

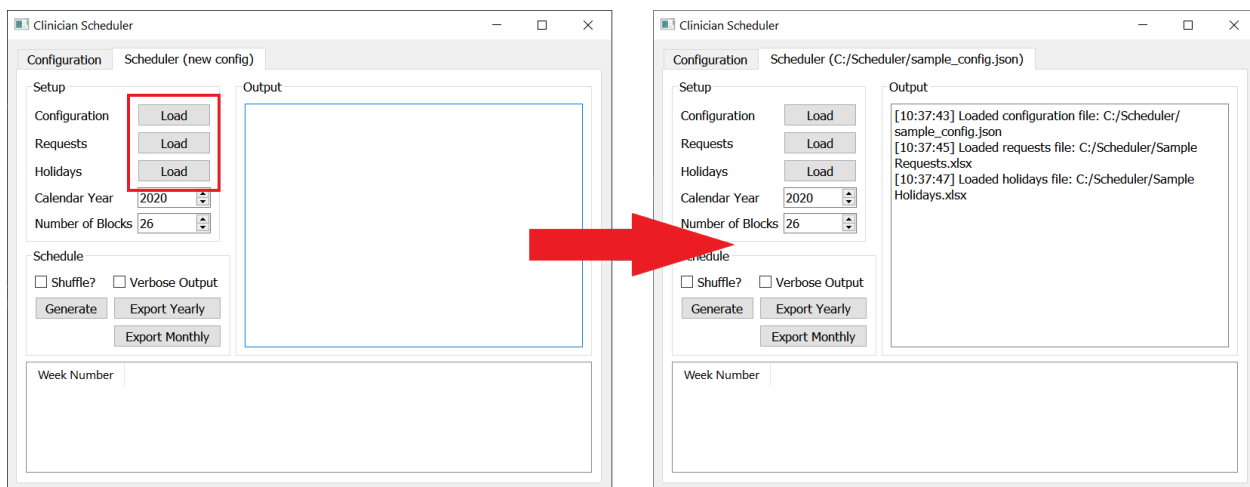

Once you have created a configuration file, you can switch over to the *Scheduler* tab of the application in order to generate a schedule.

1. Load the configuration, requests, and holidays files that you created earlier in *Clinician Configuration* and *Requests & Holiday Weekends*.

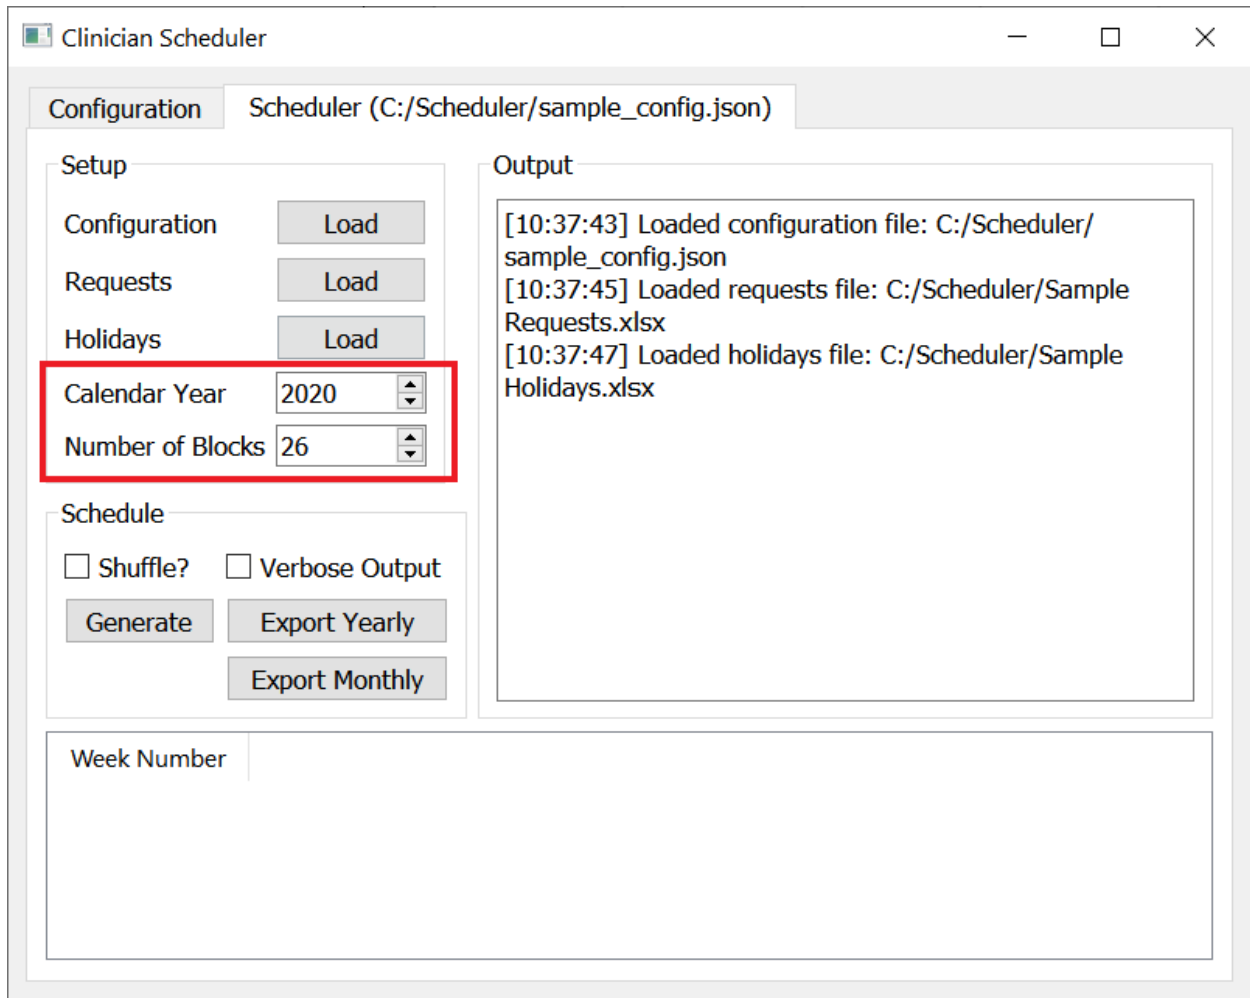

---

**Note:** You can be sure that everything loaded correctly by checking the output on the right.

---

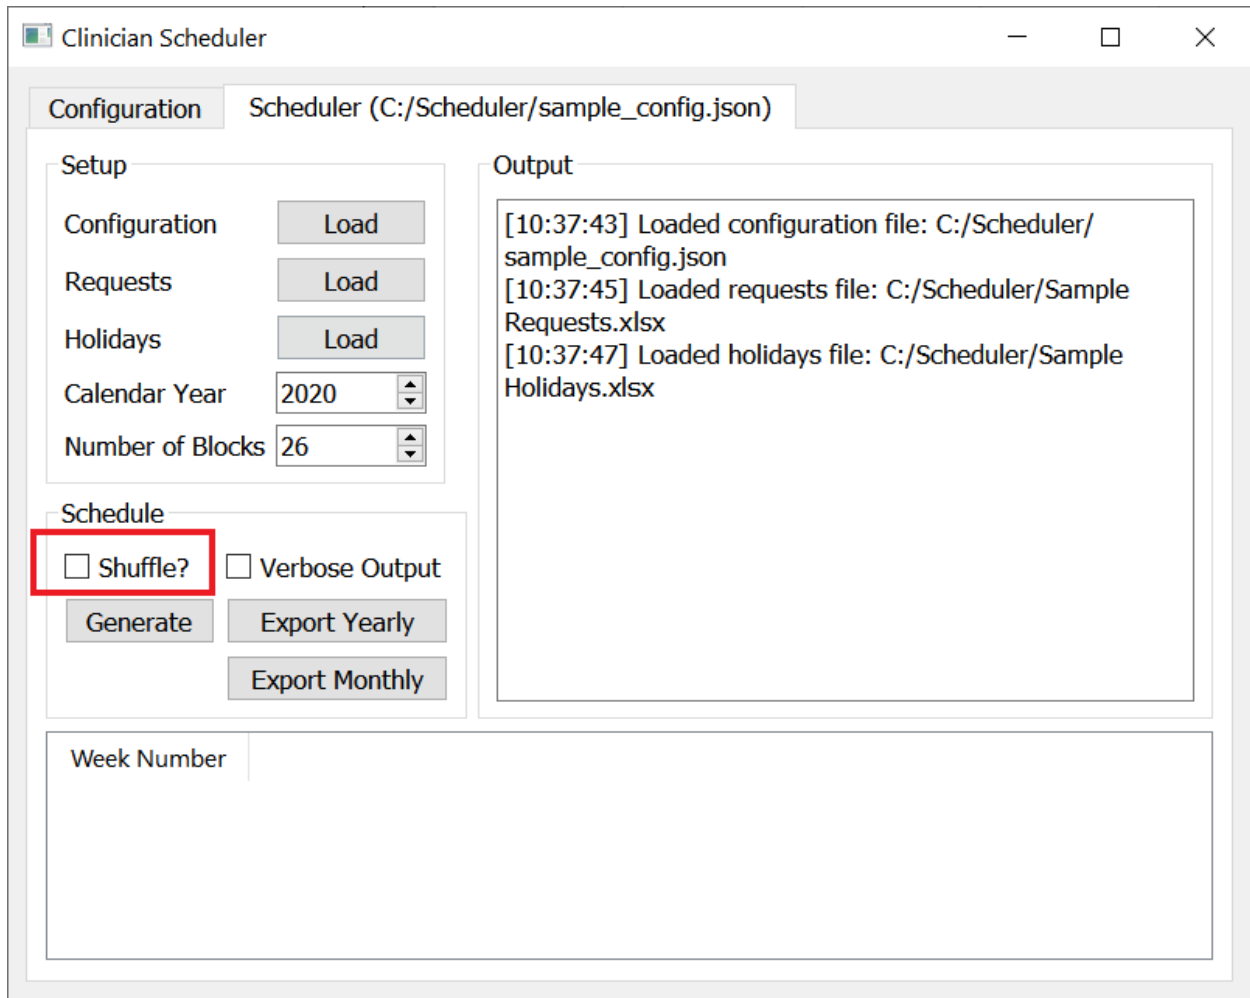

2. Set the starting calendar year for the schedule, as well as the number of 2-week blocks that you want the schedule to cover. By default, the calendar year is the upcoming year, and the number of blocks is 26, to cover a full year.

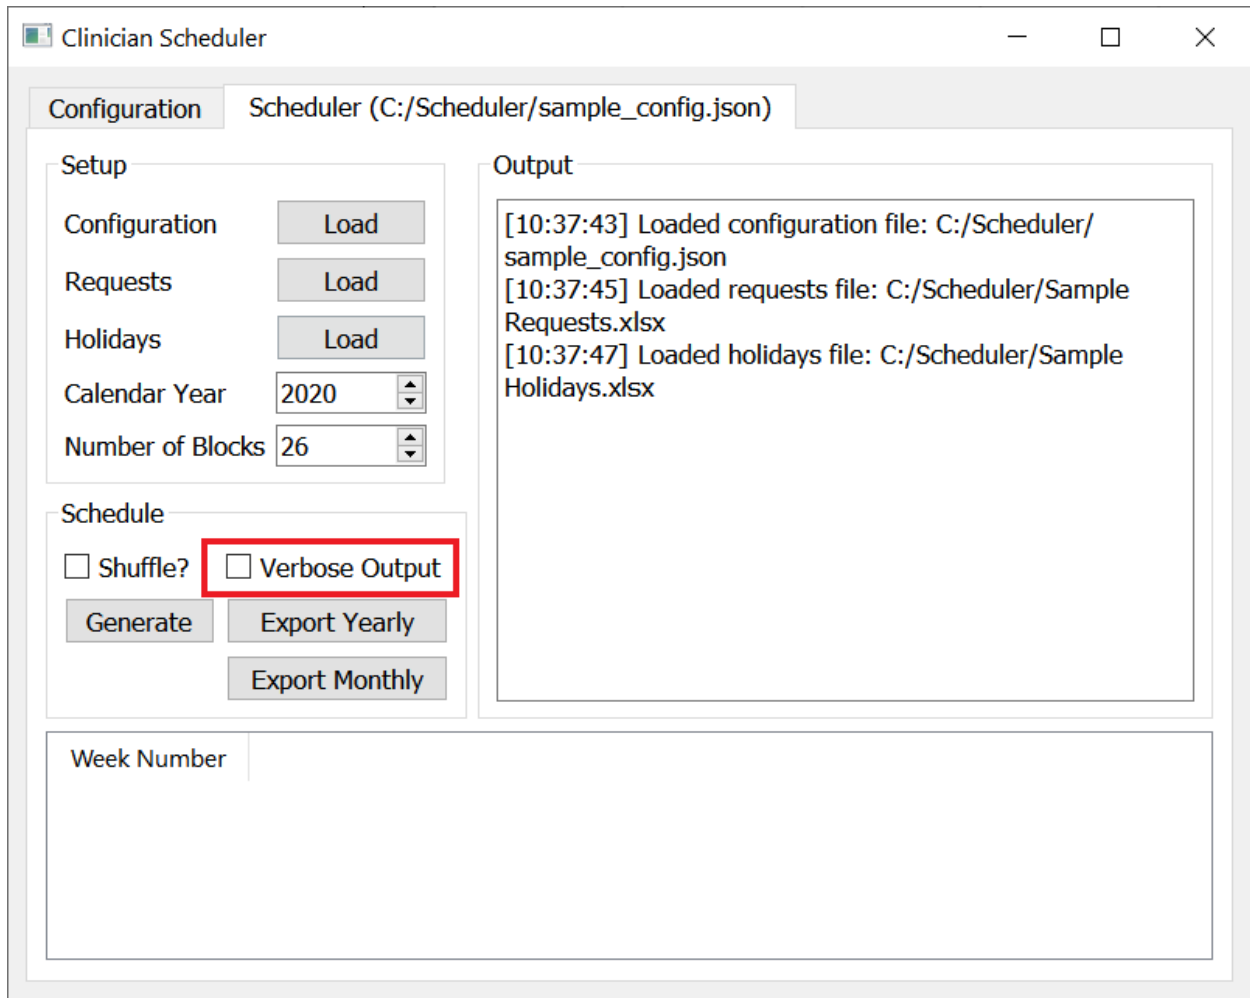

3. **(Optional)** Check the *Shuffle?* checkbox if you would like the scheduler to generate a slightly different schedule each time you click on *Generate*.

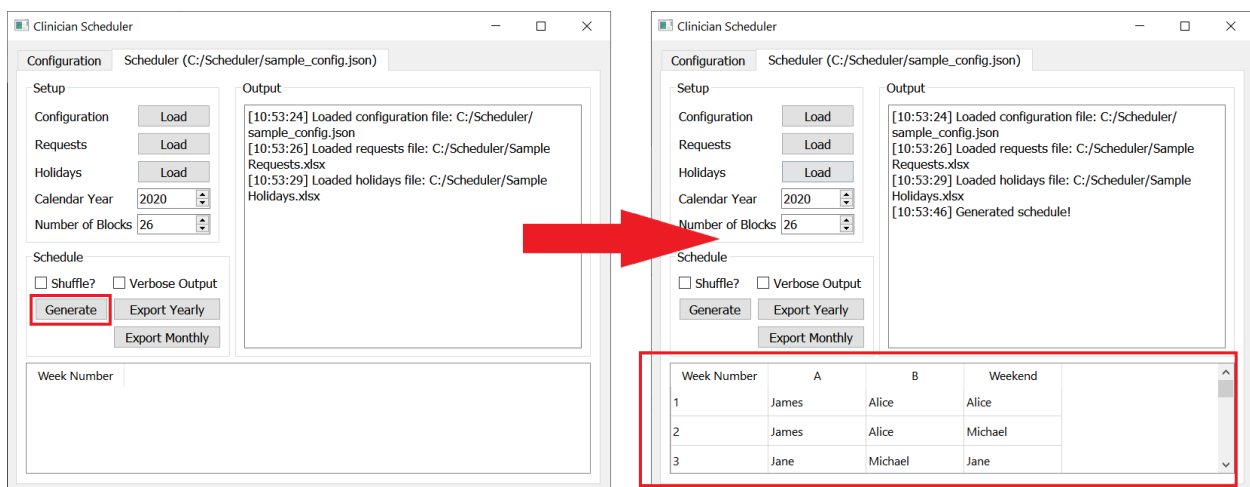

4. **(Optional)** Check the *Verbose Output* checkbox if you would like to see detailed output on the right after the scheduler finishes generating the schedule.

5. Click on *Generate* to generate a schedule.

**Warning:** Depending on the amount of clinicians and requests provided, it may take some time to find an optimal schedule.

**Warning:** It is possible that the scheduler will not be able to come up with a schedule that satisfies your constraints. This can be a result of one or more of the following reasons:

- There are not enough clinicians to distribute evenly throughout the year
- The specified constraints are too restrictive
- The minimum and maximum number of blocks of clinicians are too restrictive

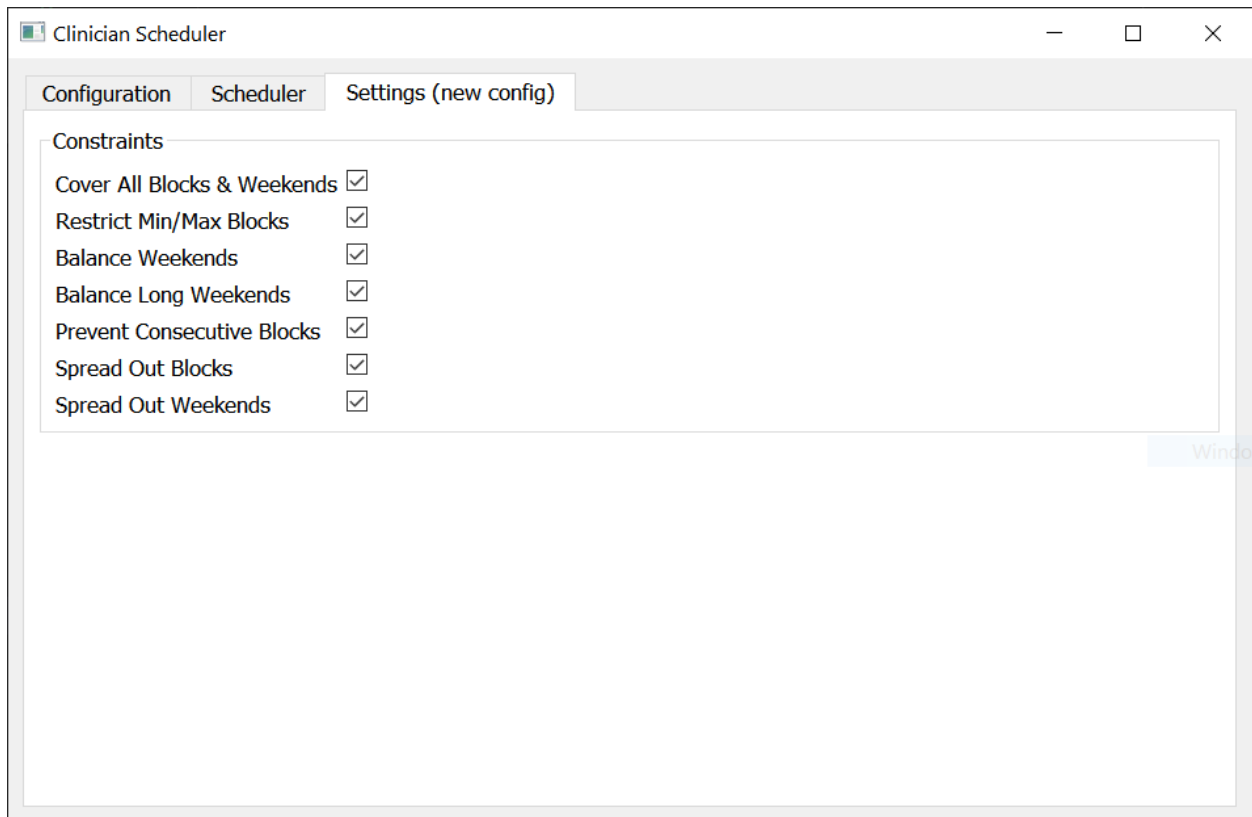

In these situations try the following:

1. Adjust the constraints in the *Settings* tab, starting from the most restrictive constraints. See [Changing settings](#)
2. Try changing the configuration file by adding new clinicians, or changing the min/max blocks of existing clinicians to allow for more flexibility. See [Clinician Configuration](#)

## 3.2 Changing settings

The *Settings* tab allows you to modify the constraints applied when generating a potential schedule.

In order to disable/enable a constraint, uncheck/check the corresponding checkbox and re-generate the schedule in the *Scheduler* tab (see [Generating a schedule](#)).

### 3.2.1 St. Michael's Hospital (SMH) Constraints

The following descriptions are specific to the SMH version of the scheduler (that is, the `scheduler-smh.exe` executable file)

---

**Note:** The following constraints are presented in order of restrictiveness, from least restrictive to most restrictive.

If you are struggling to generate a schedule, try disabling them, starting from the latter constraints.

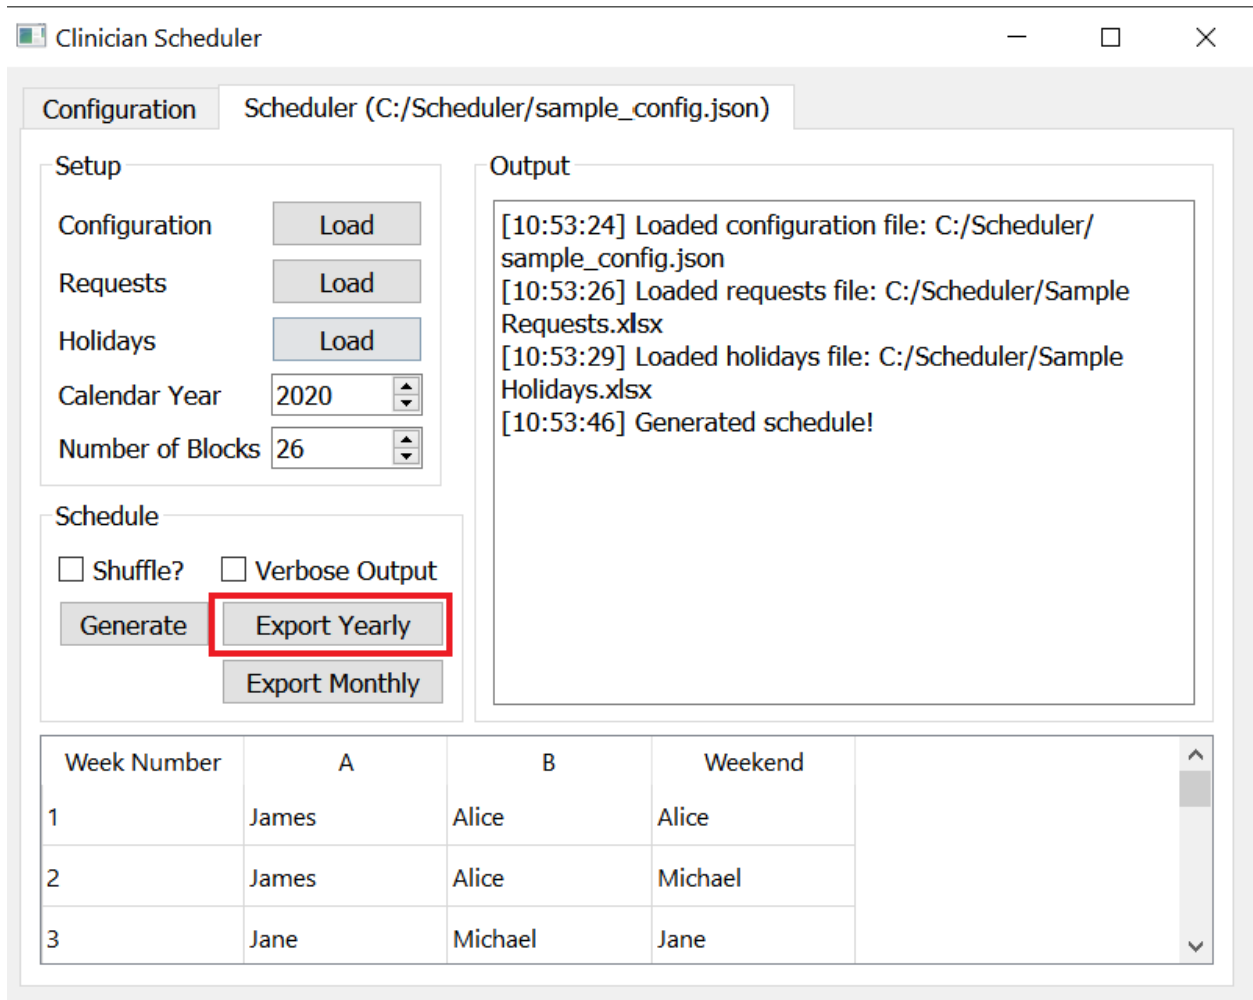

---

- **Cover All Block & Weekends** This constraint enforces that a clinician is assigned to every block and weekend, in every department.
- **Restrict Min/Max Blocks** This constraint enforces that a clinician is assigned to a number of blocks no less than their specified minimum and no more than their specified maximum.
- **Balance Weekends** This constraint enforces that all clinicians are assigned to an approximately equal number of weekends
- **Balance Long Weekends** This constraint enforces that all clinicians are assigned to an approximately equal number of long (holiday) weekends
- **Prevent Consecutive Blocks** This constraint enforces that a clinician is not assigned to two consecutive blocks in a row
- **Spread Out Blocks** This constraint enforces that a clinician is not assigned to more than 2 blocks in every 5 consecutive blocks.
- **Spread Out Weekends** This constraint enforces that a clinician is not assigned to more than 1 block in every 4 consecutive blocks.

## 3.3 Exporting a schedule

If you are satisfied with the generated schedule, you can choose to export it as an Excel file. There are two Excel format options: *Yearly Export* and *Monthly Export*.

Selecting the *Yearly Export* option will generate an excel file with a single sheet, displaying the clinicians that are covering a particular division for a given week or weekend. It is very similar to the table output in the application itself.

Selecting the *Monthly Export* option will generate a more detailed breakdown of the schedule, with a separate sheet for every month, detailing which clinician covers which division on which day.

**Configuration** Scheduler (C:/Scheduler/sample\_config.json)

**Output**

[10:53:24] Loaded configuration file: C:/Scheduler/sample\_config.json  
[10:53:26] Loaded requests file: C:/Scheduler/Sample Requests.xlsx  
[10:53:29] Loaded holidays file: C:/Scheduler/Sample Holidays.xlsx  
[10:53:46] Generated schedule!

Week Number	A	B	Weekend
1	James	Alice	Alice
2	James	Alice	Michael
3	Jane	Michael	Jane

## CHAPTER FOUR

### SAMPLE OUTPUT

#### 4.1 Yearly Excel Format

Week Number	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U
1	Week Num	A	B	Weekend																	
2	1	Jane	Bob	Jane																	
3	2	Jane	Bob	Bob																	
4	3	Michael	Alice	Alice																	
5	4	Michael	Alice	Bob																	
6	5	Jane	Bob	Jane																	
7	6	Jane	Bob	Bob																	
8	7	Michael	Alice	Michael																	
9	8	Michael	Alice	Alice																	
10	9	Bob	Jane	Bob																	
11	10	Bob	Jane	Jane																	
12	11	Alice	Michael	Alice																	
13	12	Alice	Michael	Michael																	
14	13	Jane	Bob	Bob																	
15	14	Jane	Bob	Michael																	
16	15	Alice	Michael	Alice																	
17	16	Alice	Michael	Jane																	
18	17	Jane	Bob	Bob																	
19	18	Jane	Bob	Jane																	
20	19	Michael	Alice	Alice																	
21	20	Michael	Alice	Michael																	
22	21	Jane	Bob	Bob																	
23	22	Jane	Bob	Michael																	
24	23	Michael	Alice	Alice																	
25	24	Michael	Alice	Bob																	
26	25	Jane	Bob	Jane																	
27	26	Jane	Bob	Michael																	

## 4.2 Monthly Excel Format

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T
1					A Service			B Service												
2	Date	Day	Fellow	0800 - 1700	1700 - 0800	Backup	0800 - 1700	1700 - 0800	Backup											
3	Dec-31	Mon		Jane	Jane	Bob	Bob	Bob	Jane											
4	Jan-01	Tue		Jane	Jane	Bob	Bob	Bob	Jane											
5	Jan-02	Wed		Jane	Jane	Bob	Bob	Bob	Jane
